

# Validation of WMO Core Profile 1.3

## Item 2.1: Key points of WCMP

TOYODA Eizi  
Japan Meteorological Agency

WMO/CBS/IPET-MDRD/TT-ApMD-2  
2013-06-24, Tokyo

A wide-angle photograph of a cityscape at sunset. The sky is a deep, clear blue, transitioning to a warm orange glow near the horizon. A thin crescent moon is visible in the upper right quadrant of the sky. In the background, the snow-capped peak of Mount Fuji rises above a range of lower mountains. The foreground and middle ground are filled with a dense urban landscape, featuring a mix of residential houses and taller apartment buildings. The buildings are bathed in the golden light of the setting sun, creating a warm and serene atmosphere.

# Introduction to WIS Discovery Metadata

# What's metadata?

- General
  - Data about data
- WIS
  - (Element of) data catalogue
- WIGOS
  - (Element of) observation platform and instruments

# WIS Discovery Metadata

- **Analogy to library**  
Book catalogue  
= collection of metadata

describes

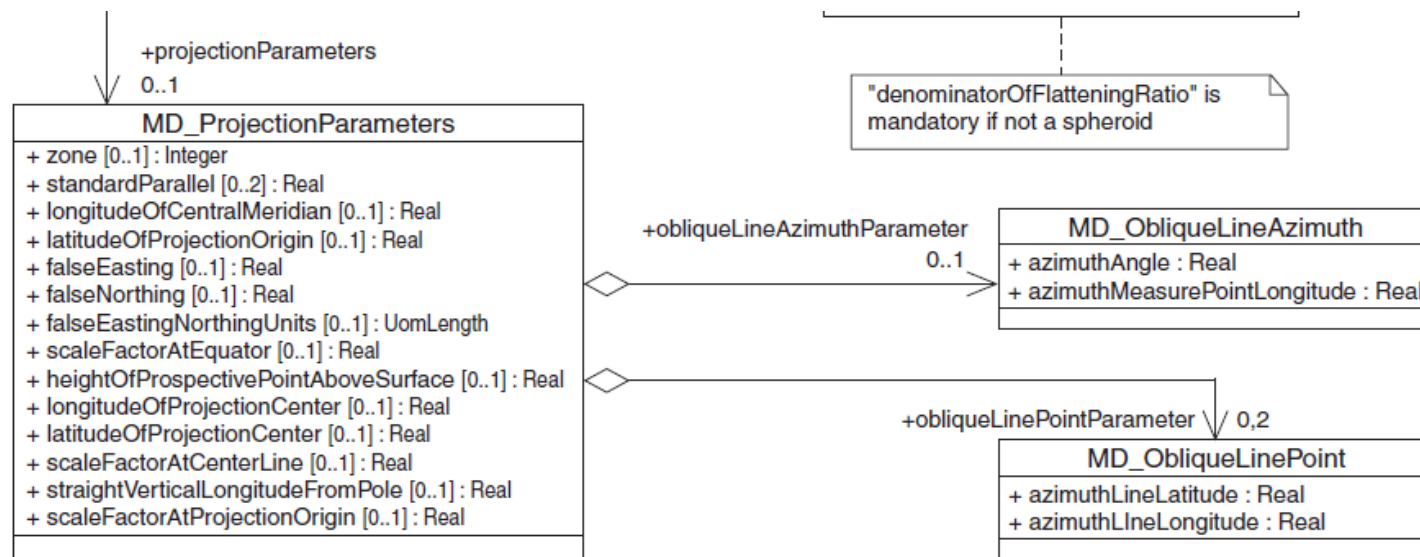

Real books

Images from Wikimedia Commons

# ISO Geographical Metadata

- ISO 19115:2003 – conceptual UML
- ISO/TS 19139:2007 – actual encoding in XML

# Typical book card

- **Title:** An Introduction to Dynamic Meteorology, 3rd Edition
- **Author:** James R. Holton
- **Subject:** Atmospheric Dynamics
- **Published:** April 12, 1992
- **Identifier:** ISBN 978-0123543554
- **Language:** English
- **Shelf:** 1st floor, 551.51-H838i-3

# WMO Core Metadata Profile

- Extension
  - Defining XML elements other than in ISO
  - Given up for interoperability
- Restriction
  - What elements in ISO are really needed
  - Recommended encoding of meteorological information

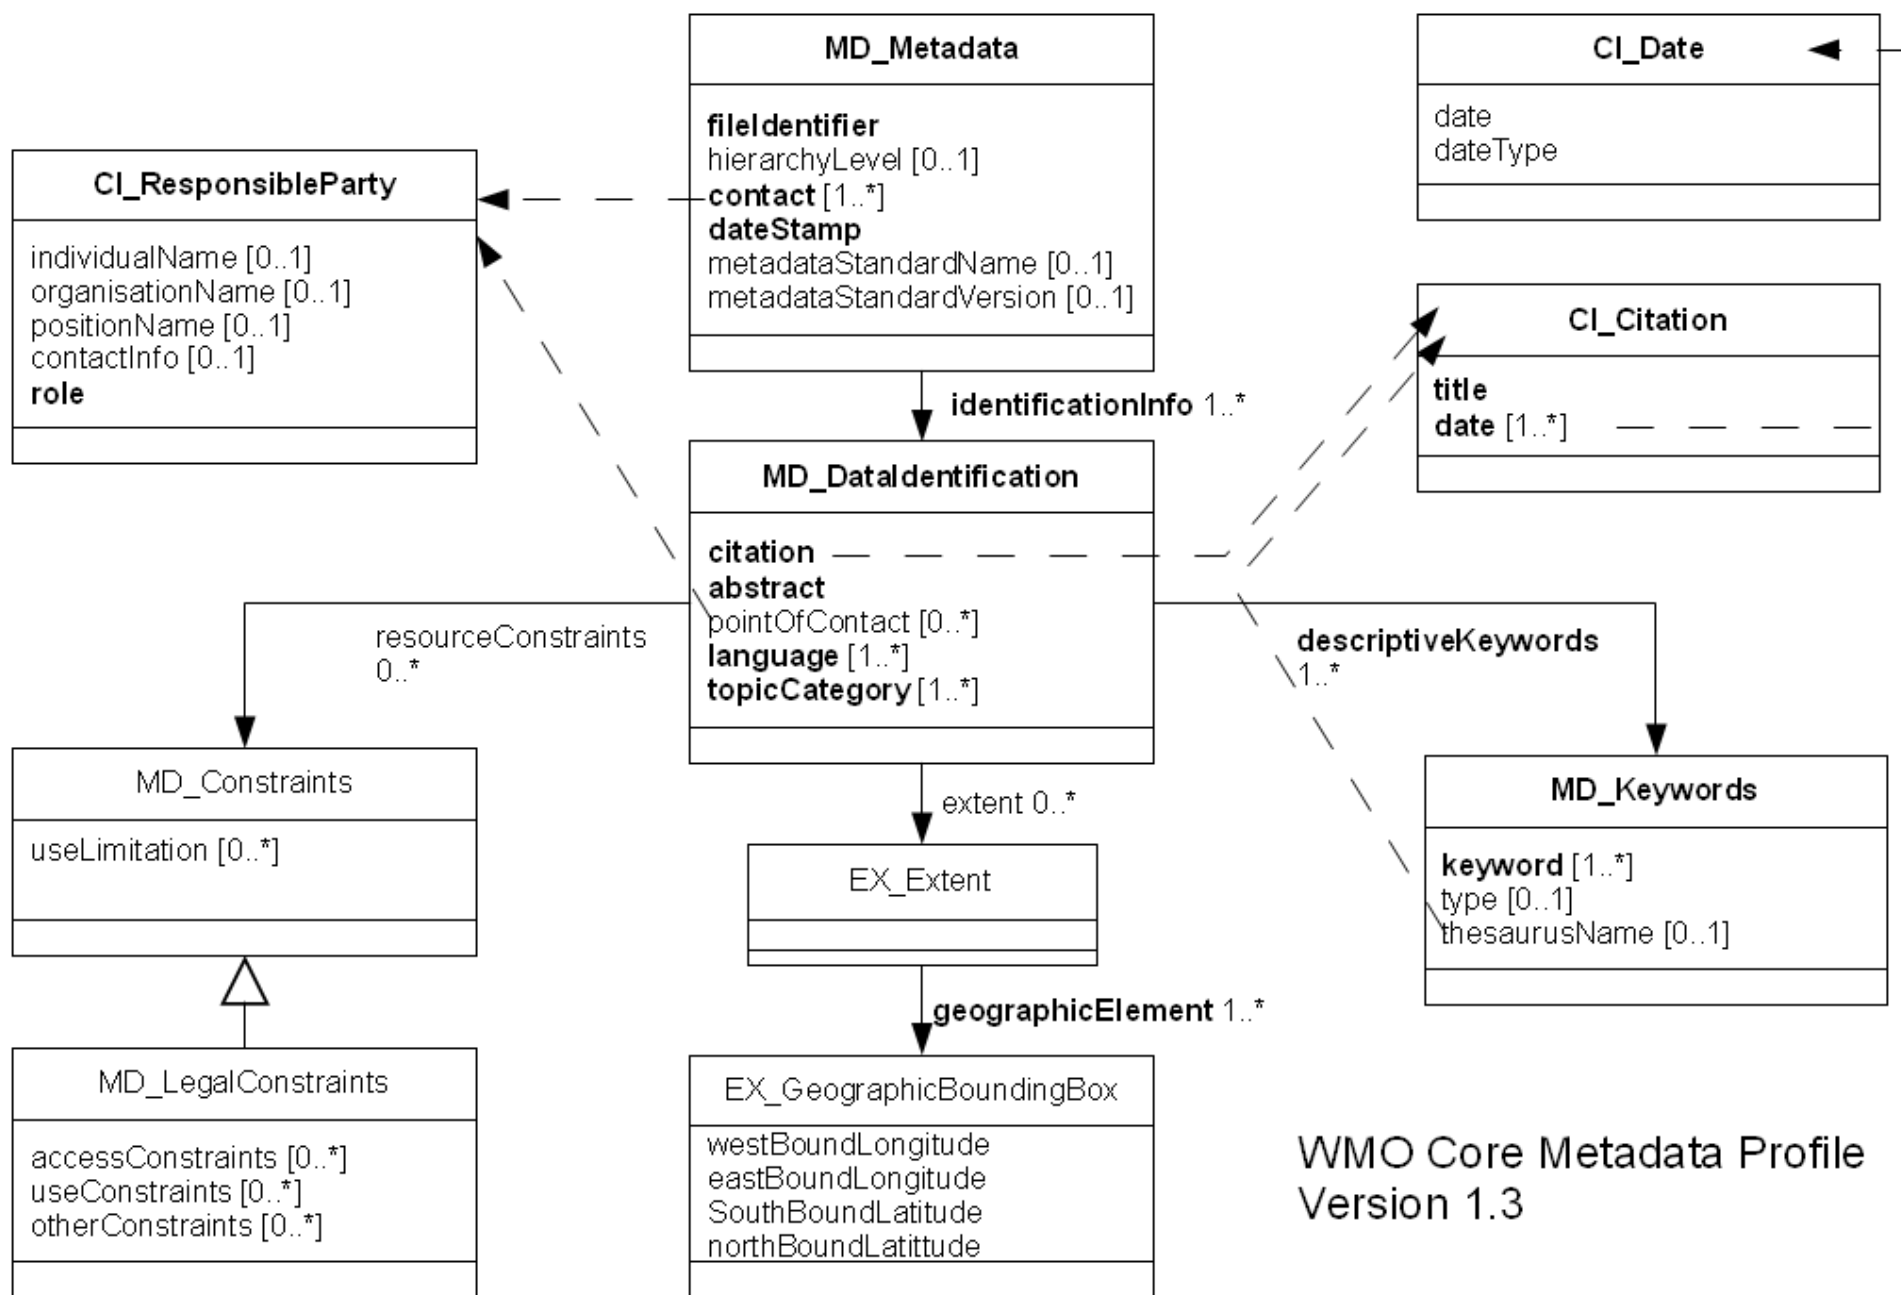

A wide-angle photograph of a cityscape at sunset. The sky is a deep, clear blue, transitioning to a warm orange glow near the horizon. A thin, crescent moon is visible in the upper right quadrant of the sky. In the background, a large, snow-capped mountain, likely Mount Fuji, rises above a range of lower mountains. The city below is densely packed with buildings, including several prominent high-rise structures. The foreground shows the rooftops and upper stories of residential or commercial buildings, some illuminated by the setting sun.

# Key points of WMO Core Profile 1.3

# Philosophy

- Computer validation
- Minimalism
- Controlled vocabulary
  - Rather than free text
  - Linked data, semantic web

WMO Core Metadata Profile  
Version 1.3

# UML becomes really compact

- It's bare minimum
  - Some more elements should be documented to be useful
- Most requirements can be tested automatically
  - Validation in Schematron language

# WCMP 1.3 Requirements (1)

- Validates XML Schema of ISO 19139
- Passes all constraints in ISO 19139 Annex A
- No default namespace
- GML namespace: <http://www.opengis.net/3.2>
- Mandatory: gmd:fileIdentifier
  - Unique in the WIS

# WCMP 1.3 Requirements (2)

- At least one “theme” keyword from WMO\_CategoryCode
- Keywords from a thesaurus goes to a single MD\_Keyword
- Bounding box (for geographical data)

# WCMP 1.3 Requirements (3)

- For data for global exchange
  - Keyword “GlobalExchange” (type dataCentre)
  - fileIdentifier prefix “urn:x-wmo:md:int.wmo.wis::”
  - resourceConstraints/\*/otherConstraints
    - One data policy code
    - One GTS priority code

# WCMP 1.3 Recommendations (1)

- URI syntax of gmd:fileIdentifier
- MD\_Metadata/contact/\*/role = pointOfContact
- Abstract provide a clear and concise statement of content
- identificationInfo/\*/pointOfContact has at least
  - A name (person, organisation, or position)
  - Email address
- citation/\*/date/\*/date in YYYY-MM-DD format

# WCMP 1.3 Recommendations (2)

- resourceConstraints for global data:
  - both accessConstraints and useConstraints
- Single resourceConstraints for constraints from single source

# Guidance needed (1)

- Contact points
  - Metadata author
    - GISC assisting MD authoring
  - Data originator / archiver / distributor
  - WMO programme or int'l project
- More thesaurus for keywords
  - Physical quantity (variable)
  - WMO Programme?
  - Geographical area?

# Guidance needed (2)

- Date range
- Update cycle
- Access to data
- Observing stations
- Grid data properties
  - Vertical level(s)
  - Forecast time(s)
  - Spatial resolution(s)

# Summary

- *WIS Discovery Metadata* is catalogue of data
- Uses ISO geographical metadata standard
- WMO Core Metadata Profile: latest version 1.3
- Must's, Should's, and Todo's
